DATA ANALYST

I designed an interactive dashboard using Tableau and SQL to analyze the RedDoorz reservation dataset. The dashboard presents booking patterns, revenue insights, and customer demographics, supporting strategic data-driven decision-making. This project highlights my skills in data analysis, exploratory data analysis (EDA), and information visualization.

EXPLORATORY DATA ANALYTICS

```
[ ]  df1["Durasi_Menginap"] = (df1["CHECK_OUT_DATE"] - df1["CHECK_IN_DATE"]).dt.days

     sns.set_style("whitegrid")
     plt.figure(figsize=(10, 6))
     ax = sns.histplot(data = df1, x='Durasi_Menginap', bins=5, color= "skyblue")

     for p in ax.patches:
         height = p.get_height()
         if height > 0 :
           ax.annotate(f'{height:.0f}', xy=(p.get_x()+p.get_width()/2., height), ha='center', va="bottom")

     plt.title('Distribusi Waktu Pemesanan')
     plt.xlabel('Durasi Pemesanan (Hari)')
     plt.ylabel('Frekuensi')

     plt.xticks(range(1, int(df1['Durasi_Menginap'].max()) + 1))

     plt.grid(True)
     plt.show()
```

```
[ ]  df1["Waktu_Pemesanan"] = (df1["CHECK_IN_DATE"] - df1["BOOKING_DATE"]).dt.days

     sns.set_style("whitegrid")
     plt.figure(figsize=(10, 6))
     bins = [-0.5, 0.5, 1.5, 2.5, 3.5, 4.5, 5.5, 6.5, 7.5, 8.5, 9.5]
     ax = sns.histplot(data = df1, x='Waktu_Pemesanan', bins=bins, color= "skyblue")

     for p in ax.patches:
         height = p.get_height()
         if height > 0 :
           ax.annotate(f'{height:.0f}', xy=(p.get_x()+p.get_width()/2., height), ha='center')

     plt.title('Distribusi Waktu Pemesanan')
     plt.xlabel('Durasi Pemesanan (Hari)')
     plt.ylabel('Frekuensi')

     plt.xticks(range(0, int(df1['Waktu_Pemesanan'].max()) + 1))

     plt.grid(True)
     plt.show()
```
